03: FILE PROCESSING

1: What is the primary difference between `for` and `while` loops? When might you use each?

2: How many iterations did you need to accurately calculate π out to the sixth decimal place? Ninth? How acurate is your estimate of π after 12 iterations? 24?

3: What are the different ways you can access a file, and why would you use each?

4: Explain why using `with` statements are safer for working with files.

5: Why is the `csv` package helpful? Why is it not helpful?
